Confidential & Proprietary

What is REDD.plus?

What is REDD.plus?

A platform that allows countries to sell REDD+ Results directly to businesses, individuals and governments looking to retire carbon credits

Built by the Coalition for Rainforest Nations to serve the interest of member countries

How does it work?

Each ton of your REDD+ results from the UNFCCC Info Hub receives a serial number and becomes part of the national registry run by S&P Global

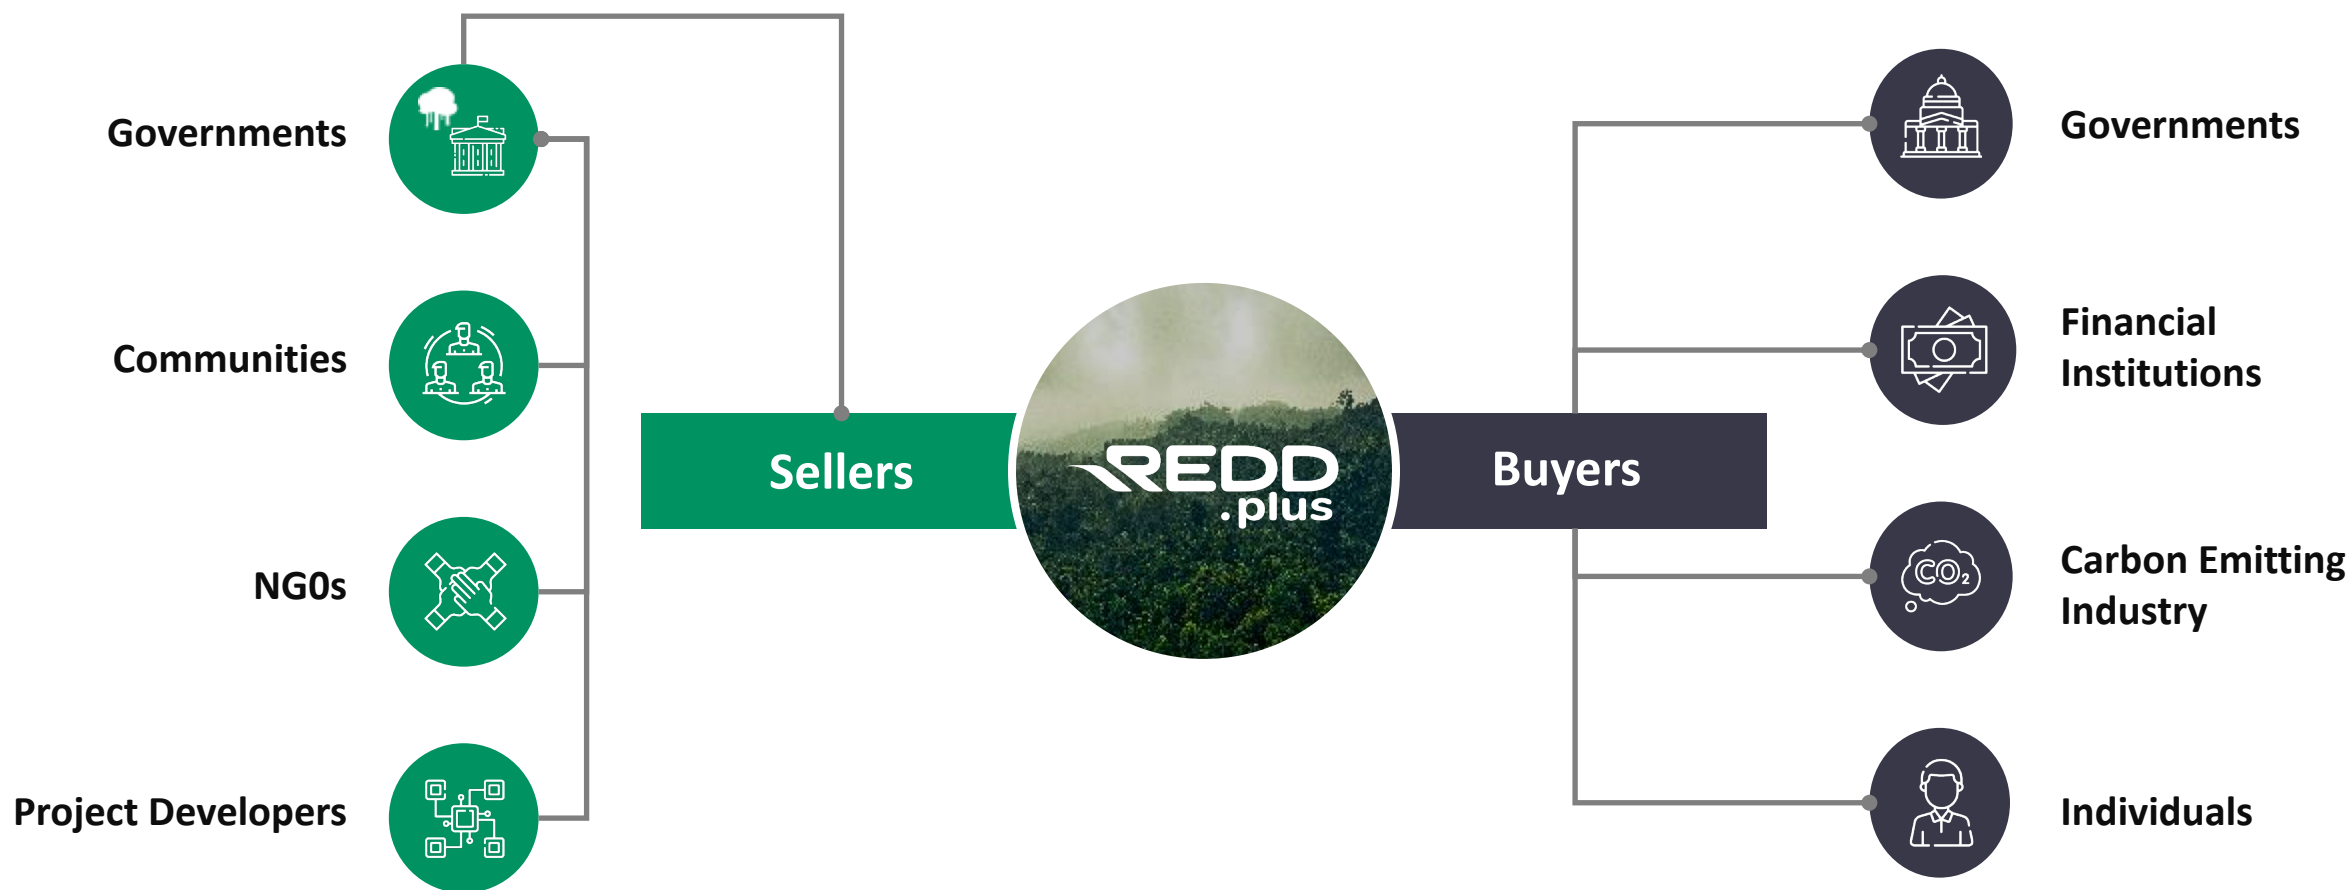

REDD+ results are now RRUs that can be bought directly on REDD.plus

Fewer entities involved in trading means more money flowing to your country and communities

REDD.plus brings stakeholders together on a transparent and low-cost platform

REDD.plus platform only accepts credits submitted to the UNFCCC REDD+ Hub

The Four Core Elements of a National REDD+ Program

National Strategy or Action Plan

National Forest Monitoring System

Forest Reference Level

Safeguards Information System

Supply – The first UNFCCC-certified credits are ready to buy, you can be the next seller.

As credits are issued on the UNFCCC REDD+ hub...

...They appear on the REDD.plus platform ready to buy

Country	Date (Year)	Results (t CO2 eq/year)	Assessed forest reference level (t CO2 eq/year)	Quantities for which payments were received (t CO2 eq/year)	Entity paying for results	Links to documentation
Papua New Guinea	2014	3,957,412	43,369,737 (for 2014) 45,049,344 (for 2015) 46,728,951 (for 2016) 48,408,557 (for 2017) 50,088,164 (for 2018)	-	-	FCCC/SBI/ Biennial update of REDD+ i FCCC/TAR/ Modified reference level Submission
	2015	5,045,902	43,369,737 (for 2014) 45,049,344 (for 2015) 46,728,951 (for 2016) 48,408,557 (for 2017) 50,088,164 (for 2018)	-	-

Papua New Guinea

Papua New Guinea is the largest of the Pacific Island nations, with a varied and rugged terrain home the third largest tropical rainforest after the Amazon and Congo basin with over 80% of the total land area containing forests. Over the past three decades, these forests have faced increasing levels of deforestation and degradation driven primarily by the expansion of logging and commercial agriculture. PNG's national REDD+ program is working to address such challenges and has already delivered 4.8 billion tCO2 eq annually in 2014 and 2015 through sustainable development planning and moving away from policies incentivizing forest clearing.
